### **EXPLANATORY NOTE**

Cancer results when cell grow out of control and form a tumor. The cancer is very serious if the tumor begins to spread throughout the body. Of the over 200 different known cancers that afflict human, 90-95% of cases are attributed to environmental factors and 5-10% due to genetics. Common environmental factors that contribute to cancer death include tobacco, diet and obesity, infections, radiation, stress, lack of physical activity, and environmental pollutants.

Cancer has a reputation as a deadly disease. It is usually treated with chemotherapy, radiation therapy and surgery. The chances of surviving the disease vary greatly by the type and location of the cancer and the extent of disease at the start of treatment. Cancer rates are expected to increase with ageing of populations and changes in lifestyles associated with economic development. In 2008, approximately 12.7 million cancers were diagnosed and 7.6 million people died of cancer worldwide. Cancers are accounted for approximately 13% of all deaths each year. This makes cancer the leading cause of death in the developed world and the second leading cause of death in the developing world including the Philippines.

This bill aims to create a Cancer Center of The Philippines because there is an urgent need to put in place cancer-control health care policies focused in strengthening the health system to cope with projected increases in cancer prevention, detection, treatment and management needs. The Center will house and nurture the above and related activities and provide care for more difficult and problematic cases. To achieve this purpose, this bill also intends to provide financial and materials support towards the establishment and maintenance of a Cancer Center for the welfare and benefit of the Filipino people.

Hence, the passage of this bill is earnestly sought.
